

STAR INTERNATIONAL SCHOOL

Super Admin Dashboard & Complete School Management System Blueprint

Purpose: This document is the master blueprint for developing the Star International School school-management software in Java. It covers the Super Admin dashboard, academic and administrative modules, student/parent/teacher portals, transport, hostel, fees, library, reports, security, and the recommended overall architecture.

1. Super Admin → Main Modules

1. Dashboard

- Total Students
- Attendance Summary
- Pending Fees
- Transport Overview
- Notifications
- Total Teachers/Staff
- Fee Collection
- Exam Overview
- Hostel Overview
- Calendar & Events

2. User & Role Management

- Super Admin
- Principal
- Accountant
- Transport Manager
- Parent
- Role & Permission Management
- Admin
- Teacher
- Librarian
- Hostel/Warden
- Student
- Login/Activity Logs

3. Academic Management

- Academic Year
- Sections
- Teachers & Subjects
- Syllabus
- Promotion/Detention
- Classes
- Subjects
- Timetable
- Lesson Plans
- Academic Calendar

4. Student Management

- Admission
- Student ID/Card
- Documents
- Student Attendance
- TC/Leaving Certificate
- Student Profile
- Parent Details
- Previous School Records
- Student Reports
- Student Import/Export

5. Staff Management

- Teacher/Staff Profile
- Designation
- Leave
- Staff Documents
- Departments
- Staff Attendance
- Salary/Payroll
- Staff Reports

6. Parent Management

- Parent Profile
- Parent Login
- Communication
- Attendance
- Feedback
- Children
- Parent App Access
- Fee Information
- Exam Results

7. Examination

- Exam Types
- Term/Annual Exams
- Marks Entry
- Grade/Rank
- Unit Tests
- Exam Schedule
- Grade Configuration
- Result Processing

- Report Card
- Exam Reports

8. Attendance

- Student Attendance
- Staff Attendance
- Daily/Monthly Reports

9. Transport

- Routes
- Vehicles
- Transport Staff
- Transport Fees
- Transport Tracking

10. Hostel

- Hostel/Building
- Beds
- Warden
- Hostel Fees
- Hostel Reports

11. Fees & Accounts

- Fee Structure
- Student Fees
- Scholarships
- Fee Collection
- Online Payment
- Financial Reports

12. Library

- Books
- Authors/Publishers
- Student Membership
- Fine

13. Communication

- SMS
- Push Notifications
- Announcements
- Events

14. Reports

- Student Reports
- Attendance Reports
- Fee Reports
- Transport Reports
- Library Reports
- Export PDF/Excel

- Progress Report

- Teacher Attendance
- Leave Management
- Attendance Notifications

- Stops
- Drivers
- Student Vehicle Assignment
- Vehicle Documents
- Transport Reports

- Rooms
- Student Allocation
- Hostel Attendance
- Mess/Food Management

- Class-wise Fees
- Discounts/Concessions
- Pending Fees
- Receipts
- Refunds

- Categories
- Book Issue/Return
- Teacher Membership
- Library Reports

- Email
- Circulars
- Notice Board
- Parent/Student Notifications

- Academic Reports
- Examination Reports
- Staff Reports
- Hostel Reports
- Custom Reports

15. Apps & Portals

- Parent App
- Student Portal/App
- Accountant Portal
- Transport Portal
- Teacher Portal/App
- Admin Portal
- Librarian Portal
- Hostel/Warden Portal

16. System Settings

- School Profile
- Academic Settings
- Exam Settings
- Fee Settings
- SMS/Email Configuration
- Backup Settings
- Logo
- Class/Section Settings
- Grade Settings
- Notification Settings
- App Settings

17. Backup & Restore

- Database Backup
- Manual Backup
- Backup History
- Automatic Backup
- Restore

18. Audit & Security

- Login History
- Admin Activity
- Failed Login Attempts
- System Logs
- User Activity
- Data Change History
- Security Logs

2. Recommended System Architecture

Think of the system as one central School Management System rather than a collection of unrelated portals.

3. Central Backend / Database Architecture

Recommended principle: Do not develop every portal as a completely separate system. Build one central Java backend/database with Role-Based Access Control (RBAC). When the Super Admin changes information, the appropriate information can automatically appear in the Teacher Portal, Parent App, Student Portal, and Admin Portal according to permissions.

4. Role-Based Access

Role	Main Access
Super Admin	Full system access and control; manages school configuration, users, roles, permissions, reports, security, backups, and all modules.
Admin	Administrative management according to permissions assigned by Super Admin.
Principal	Academic/administrative oversight, student/staff monitoring, examinations, attendance, reports and approvals.
Teacher	Assigned classes/subjects, timetable, attendance, homework, marks/exams, communication and student academic information.

Role	Main Access
Accountant	Fees, collections, receipts, discounts/concessions, refunds and financial reports.
Librarian	Books, categories, issue/return, memberships, fines and library reports.
Transport Manager	Routes, stops, vehicles, drivers, assignments, transport fees, documents and tracking.
Hostel/Warden	Hostels, rooms/beds, student allocation, attendance, mess/food, hostel fees and reports.
Parent	Child information, attendance, fees, results, notices, communication and feedback.
Student	Personal academic information, timetable, attendance, homework, results and notices.

5. Important Development Guidance

- Use one central School Management System backend/database.
- Implement Role-Based Access Control (RBAC) from the beginning.
- Keep modules interconnected so student, parent, teacher, fee, attendance and examination information stays consistent.
- Keep government/board-style academic requirements configurable instead of hard-coding them to one board.
- Make Exam, Student Records, Attendance, Promotion, Report Card, and document/certificate modules configurable.
- Maintain audit logs for important data changes and administrative actions.
- Include database backup, restore and backup history.
- Design APIs so web portals and mobile apps can use the same backend.
- Use secure authentication, permission checks, password policies, failed-login monitoring and session controls.
- Provide PDF/Excel export for important reports.
- Keep the architecture extensible so additional modules can be added later.

6. Suggested Super Admin Sidebar

Dashboard → User Management → Role & Permissions → Academic Management → Student Management → Staff Management → Parent Management → Examination → Attendance → Transport Management → Hostel Management → Fee Management → Library Management → Communication → Reports → System Settings → Backup & Restore → Audit Logs → Logout

7. Final Development Flow

Super Admin Login
↓
Authentication + Role Verification
↓
Super Admin Dashboard
↓
School Setup → Academic Year → Classes → Sections → Subjects
↓
Users / Roles / Permissions
↓
Students + Parents + Teachers + Staff
↓
Attendance + Timetable + Homework + Examination
↓
Fees + Library + Transport + Hostel
↓
Reports + Communication + Notifications
↓
Parent App + Teacher Portal + Student Portal + Admin Portal
↓
Audit Logs + Backup + Security + Settings

8. Core Objective

Star International School Management System should work as a complete, interconnected solution for academic, administrative and operational management. The Super Admin should have centralized control, while every other user sees only the modules and data permitted by their role.

This document is intended to be used as the initial functional blueprint before database design, API development, UI development, mobile-app development, testing and deployment.
